Assignment

1. Select a scenario from your organization (e.g. a new software development project) and analyze the scenario. Determine the context for the organization and the project. Consider the business domain and structure, project scope, and any other relevant factors. Based on your analysis, select a lifecycle and approach that aligns with the context of the scenario. Justify your selection.

2. Identify the techniques that will be required to deliver the requirements in the scenario.

3. Create a plan for delivering the requirements in the scenario, taking into account the context, lifecycle, approach, and techniques identified.

4. Summarize your findings and explain how your plan aligns with the context and addresses the requirements of the scenario.
